Saurav Premkumar

Applied AI Engineer building LLM-powered applications and data systems | NYU MS '25
United States

Summary

I build AI-assisted data systems that turn messy signals into useful decisions. My work sits at the intersection of AI engineering, data science, and analytics engineering. Recently, I've built RAG and LLM workflows, graph-based similarity systems across 130K+ market signals, and MCP-based multi-agent research tools for analysis. Previously, I built SQL/dbt data models, automated reporting workflows, and product/business analytics systems that reduced manual reporting by 150+ hours/month, improved marketing ROI by 15%, and helped teams make better decisions from cleaner data. Core strengths:

- AI/LLM Systems: RAG, Agentic AI Workflows, Vector Search, LangChain, MCP, LLM Evaluation
- Data & Analytics: SQL, Python, dbt, Snowflake, BigQuery, Airflow, Tableau, Power BI
- Product & Business Analytics: Experimentation, Funnel Analysis, Cohort Analysis, KPI Design
- Cloud & Automation: AWS Lambda, S3, API Gateway, SageMaker Serverless, EventBridge, SQS, ECS

I'm currently targeting AI Engineer, Data Scientist, Analytics Engineer, Applied AI, and Forward Deployed Engineer roles where I can build systems that connect data, AI, and real business workflows. Authorized to work in the US.

Experience

Archemy

AI Data Scientist

July 2025 - Present (1 year 2 months)

New York, United States

- Built serverless RAG workflows using SageMaker Serverless embeddings, AWS S3 Vectors, Lambda ingestion, query rewriting, and reranking.
- Segmented 130K+ market signals into a graph-based behavioral taxonomy for anomaly review and signal analysis.
- Implemented LangSmith/RAGAS evaluation workflows to measure retrieval precision, context relevance, answer faithfulness, and latency.

- Enabled scalable entity matching across a distributed P2P system by building an end-to-end pipeline that transformed high-volume time-series signals into structured features for similarity retrieval, reducing manual identification effort.
- Restored end-to-end prediction workflows by diagnosing and resolving cross-service failures across 5+ microservices and API dependencies, improving pipeline reliability and unblocking downstream model serving.

NYU Stern School of Business

AI Research Assistant

January 2024 - May 2025 (1 year 5 months)

New York, United States

- Built Python-based data pipelines integrating financial APIs and LLM-driven signal extraction into a unified valuation framework, enabling scalable benchmarking and comparative analysis across S&P 500 companies.
- Designed data processing workflows to standardize multi-source datasets, improving reliability and consistency for downstream analytics.
- Automated transcription and data extraction workflows for 20+ research recordings, reducing turnaround time by 60% and accelerating analysis.

Jetking Infotrain Limited

Data Scientist

October 2022 - May 2023 (8 months)

- Resolved inconsistent reporting across business teams by building centralized SQL data models and consolidating reporting logic, reducing discrepancies by 30% and cutting manual reporting by 150+ hours/month.
- Analyzed acquisition funnel behavior to uncover unexpected drop-offs across landing page variants, driving targeted A/B experiments and reallocating spend toward higher-performing channels, improving marketing ROI by 15%.
- Designed KPI frameworks across marketing, finance, and operations, establishing a single source of truth across teams and contributing to 20% revenue growth.
- Built and maintained ETL pipelines to unify multi-source data across 30+ centers, enabling scalable self-serve analytics for cross-functional stakeholders.

Tools: SQL, Python, ETL, Data Modeling, Experimentation, Tableau/BI Tools

ILRNU INC

Product Analyst (Product Analytics / Growth Analytics)

February 2022 - August 2022 (7 months)

Bengaluru

- Built SQL-based cohort and user behavior datasets to analyze onboarding and engagement funnels, identifying friction points and increasing user acquisition by 60%.
- Partnered with product and engineering teams to translate analytics into product decisions, driving a 2x increase in user engagement.
- Developed sprint-level tracking dashboards and operational metrics, improving delivery timelines by 80% through data-driven execution.

Tools: SQL, Python, Product Analytics, Cohort Analysis, Dashboards

Tata Consultancy Services

Business Intelligence Engineer

August 2019 - December 2021 (2 years 5 months)

- Improved forecasting accuracy by 20% across APAC operations by identifying and resolving performance and data inconsistencies in ETL pipelines, redesigning query logic and data flow for large-scale processing.
- Reduced ad-hoc reporting requests by 30% by standardizing fragmented data transformations using dimensional modeling, integrating data from multiple sources into consistent, reliable reporting layers.
- Achieved 95% data quality compliance for production reporting systems by developing automated data validation and quality monitoring pipelines.
- Reduced analytics delivery time by 15% by standardizing request workflows and prioritization, improving turnaround for business-critical reporting.
- Collaborated with business stakeholders across APAC to translate reporting requirements into scalable SQL-based data models, supporting decision-making across operations and finance.

Tools: SQL, ETL Pipelines, Data Modeling, Data Warehousing, SAP HANA

Education

New York University

Master's degree, Management Information Systems, General · (August 2023)

NYU Stern School of Business

Masters · (September 2023 - May 2025)

Amrita University, Amritapuri Campus

Bachelor of Technology, Electrical and Electronics Engineering · (2015 - 2019)
